

London TDM

Civil and Construction Engineering Training Courses

Course Venue: Malaysia - Kuala Lumpur

Course Date: From 16 November 2025 To 20 November 2025

Course Place: Royale Chulan Hotel

Course Fees: 6,000 USD

Introduction

The construction industry significantly impacts the environment, and understanding these impacts is crucial for sustainable development. This professional course, "Environmental Impact in Construction Projects," offers insights into identifying, analyzing, and mitigating environmental concerns in construction. Over five days, participants will engage with experts, case studies, and practical sessions to equip them with the necessary tools to promote eco-friendly practices in the construction field.

Objectives

- Understand the environmental impact of construction activities.
- Identify strategies to minimize negative environmental effects.
- Analyze regulatory frameworks and compliance requirements.
- Incorporate sustainable practices into project planning and execution.
- Evaluate real-world case studies to learn from industry best practices.

Course Outlines

Day 1: Understanding Environmental Impacts

- Introduction to environmental science in construction.
- Key environmental issues caused by construction activities.
- Methods for assessing environmental impacts.
- Overview of Environmental Impact Assessments (EIA).
- Discussion on the life cycle of construction projects and their eco-footprint.

Day 2: Regulatory Frameworks and Compliance

- Overview of international and national environmental regulations.
- Role of government agencies in enforcing environmental standards.
- Understanding compliance and enforcement mechanisms.
- Case studies on regulatory compliance and violations.
- Workshop: Navigating regulatory requirements in project planning.

Day 3: Sustainable Construction Practices

- Introduction to green building materials and technologies.
- Designing for sustainability: Principles and applications.
- Waste management strategies in construction projects.
- Energy efficiency and renewable energy integration.
- Workshop: Developing a sustainability plan for a sample project.

Day 4: Analyzing Environmental Impact in Practice

- Detailed case studies of successful sustainable construction projects.
- Techniques for monitoring and reporting environmental performance.
- Stakeholder engagement and community relations.
- Risk management and mitigation strategies.
- Interactive session: Evaluating the impact of ongoing projects.

Day 5: Implementing Change and Future Trends

- Strategies for organizational change toward sustainability.
- Future trends in eco-friendly construction technology.
- Innovative financing and incentives for green projects.
- Building partnerships for sustainable development.
- Course wrap-up and action planning for participants' organizations.
